

AC SEPAROL G5A

AC SEPAROL G5A is an interleavant powder based on polymethyl methacrylate and adipic acid for transport and storage of glass if a high anti-stain/anti-weathering effect is required. It is normally used when powdering float glass on-line.

AC SEPAROL G5A has a medium particle size of approx. 100 µm, the particle size of the PMMA beads is approx. 120 µm.

Specification

Acid number:	350 - 420 mg KOH/g	DGF C-V 2
Bulk density:	620 - 760 g/l	DGF H-II 1b
Particle size > 305 µm:	max 5 %	Laser Particle Analysis
Temperature resistance:	passed	AC MV 26 (80 °C, 30 min)

Handling

AC SEPAROL G5A is labelled in accordance with EC directives or respective national laws as "irritant". When handling AC SEPAROL G5A, the use of safety gloves and a dust mask is recommended. For further safety advice please see our Material Safety Data Sheet.

Storage

Stored in well-closed containers at temperatures between 5 to 40 °C AC SEPAROL G5A has a shelf-life of minimum 1 year.
